SHIVANSH SINGH

Boston, MA | Available from December 2026

Phone: 857-351-5710 Email: shivanshneu@gmail.com shivanshsingh.in Github Linkedin

PROFESSIONAL SUMMARY

Software engineer building REST APIs on AWS, async FastAPI services with CI/CD, and LLM evaluation pipelines that test where model output fails. Seeking a Software Development Engineer role focused on reliable, scalable services.

EDUCATION

Northeastern University **Apr 2025 - Dec 2026**
Master of Professional Studies in Analytics (GPA: 3.96) *Boston, MA*

EXPERIENCE

FIA (Feminine Intelligence Agency) **Jan 2026 - Jun 2026**
Software Engineer *Boston, MA*

- Led a 13-student research team studying whether Large Language Models (LLMs) can identify signs of psychological manipulation in relationship conversations, using a clinical psychology checklist of 28 manipulation behaviors.
- Built a Python evaluation pipeline that ran 170 relationship scenarios through GPT-4o, Claude, and DeepSeek, then scored each model's response against our researched 28 behavior checklist to compare how the models performed.
- Found that models reliably flag clearly dangerous situations (averaging 7.6 out of 10 on severity) but fail to tell different types of manipulation apart, and got only 19% accuracy when classifying cases into manipulation patterns.

Travlog **Sep 2023 - Jan 2025**
Software Engineer *Remote - India*

- Engineered the mobile and backend stack for a YC-track social travel app, building REST API endpoints and integrating AWS Cognito for user accounts, S3 for photo and video storage, and Firebase for real-time features.
- Optimized the push notification system on Firebase to send messages out in batches of 500 users at a time, fitting within a 256MB memory limit and 9-minute time limit per run, so the app could reliably notify everyone for events.

PROJECTS

RAG Q&A System | *AI Systems Engineering, Production ML* **Apr 2026**

- Built a retrieval-augmented Q&A service with 8 async FastAPI endpoints and LangSmith tracing to monitor latency and cost per query, deployed to AWS App Runner through a Docker and GitHub Actions CI/CD pipeline
- Wrote a 33-test pytest suite with async mocks for OpenAI, Qdrant, and the automated evaluation framework instead of live services, so each CI run validates streaming and error handling

DermRx Agent | *MedGemma Impact Challenge 2026* **[Link]** **Feb 2026**

- Built an agentic drug-safety prototype that pairs Google's MedSigLIP, MedGemma, and TxGemma models with a FastAPI REST backend and an async DDInter scraper, returning flagged interactions in under 60 seconds
- Routed drug-drug interaction checks to DDInter's 100,000+ curated interactions instead of TxGemma after verifying it misclassified fluconazole and tracing the error to gaps in its training

TECHNICAL SKILLS

Languages & Databases: Python, SQL, MongoDB
Frameworks & Tools: Git, FastAPI, Docker, GitHub Actions, pytest, LangSmith
Cloud & Practices: AWS (App Runner, ECR, S3, Lambda), CI/CD, Object-Oriented Design, Agile, GenAI

LEADERSHIP & AWARDS

Google Cloud Hackathon Winner (1st Place) | *GDG Boston & Northeastern University* **[Link]** **Jun 2026**

Leadership & Influence Award | *Feminine Intelligence Agency (FIA)* **[Link]** **Dec 2025**

Hackathon Winner (Technical Innovation Award) | *CodeLinc10 Lincoln Capital* **[Link]** **Oct 2025**
